COMPILED OF WATER-TEMPERATURE DATA FOR OREGON STREAMS

By A. M. Moore

INTRODUCTION

Practically all water-temperature data collected through September 30, 1962, by various agencies, both public and private, are presented herein. Only those records with so few observations as to be of no significant value have been omitted.

Through the 1962 water year, the Geological Survey has collected up to 16 years of spot-observation data (periodic measurements) at more than 200 sites and 1 or more years of thermograph records at 55 sites. Some thermograph records that began as early as 1950 are still being collected and more than 55 records are being collected currently. However, about 25 of these records were begun during the summer of 1963 and are therefore not included in this compilation.

Through 1962, other agencies have collected more than 70 thermograph records and about as many spot-observation records. Many of the thermograph records, however, are only a few months to a year in length.

1990-1991, AND THE VARIOUS CONNECTIONS TO THE AUTHOR

2796 M.J.

REVIEW

In September 1990 I attended the International Conference on the Environment, Culture & Sustainable Development at the United Nations in New York. This was my first international conference and it was a great experience. I was invited to speak on the topic of "The Environment and Sustainable Development: The Case of the World Bank". I also had the opportunity to meet many people from all over the world who were involved in environmental issues. I was particularly impressed by the work of the World Bank, which has been instrumental in promoting sustainable development. I also learned about the importance of local communities in the process of sustainable development. I believe that the World Bank's approach to sustainable development is a good model for other countries to follow. I also learned about the challenges of sustainable development, such as poverty, inequality, and climate change. I believe that the World Bank's commitment to sustainable development is a positive one and that it will continue to play a important role in the future of our planet.

The thermograph records collected by the Geological Survey have been published through 1958 in the annual series of water-supply papers, "Quality of Surface Waters of the United States". Beginning with records for 1962, the Geological Survey in Oregon is publishing thermograph records, along with discharge records for the same site, in the annual statewide report. The temperature records for 1959-61 will eventually be published in the annual water-supply papers on quality of water, but meanwhile this open-file compilation will serve to make available the monthly figures of water temperature at thermograph sites.

Most of the thermograph and spot-observation records collected by other agencies have never been published, and the same is true for all spot observations made by the Geological Survey. This compilation does not show daily temperatures or individual observations because their inclusion would greatly increase the size of the report and because mean monthly temperatures and monthly extremes of temperature are believed to be of more significance.

The report was prepared under the general supervision of R. B. Sanderson, District Engineer, in charge of surface-water investigations in Oregon. E. H. Stolte assisted in the preparation of manuscript descriptions for the various observation sites.

COOPERATION

Financial assistance in the preparation of this report was furnished by: Oregon State Water Resources Board; U.S. Bureau of Reclamation; U.S. Corps of Engineers; U.S. Public Health Service; and U.S. Soil Conservation Service.

and the record length is set by the value `maxRecordLength` with a default value of 1000. When `maxRecordLength` is set to 1000, records exceeding 1000 bytes will be split into multiple records. If the value of `maxRecordLength` is set to 1000 or less, then the entire record will be stored in a single record. The `maxRecordLength` value is useful when dealing with large records, such as images or videos, where it is important to store the entire record in a single file. It is also useful when dealing with multiple records, such as when dealing with multiple files or when dealing with multiple databases.

The `maxRecordLength` value is set to 1000 by default, but can be changed to any value between 1 and 1000. The `maxRecordLength` value is used to ensure that the total size of all records in a single file does not exceed the maximum allowed file size. This is important because if the total size of all records exceeds the maximum allowed file size, then the file will be truncated and the data will be lost.

The `maxRecordLength` value is also used to ensure that the total size of all records in a single database does not exceed the maximum allowed database size. This is important because if the total size of all records exceeds the maximum allowed database size, then the database will be truncated and the data will be lost.

The `maxRecordLength` value is also used to ensure that the total size of all records in a single table does not exceed the maximum allowed table size. This is important because if the total size of all records exceeds the maximum allowed table size, then the table will be truncated and the data will be lost.

BUFILED

Indicates that the record is to be written to the `BUFILED` section of the `BUFILED` table. This section contains the records that are being processed by the `BUFILED` function. The `BUFILED` table is a temporary table that is created when the `BUFILED` function is called. It contains the records that are being processed by the `BUFILED` function. The `BUFILED` table is a temporary table that is created when the `BUFILED` function is called. It contains the records that are being processed by the `BUFILED` function.

Some records included in this report were furnished by: U.S. Fish and Wildlife Service, Bureau of Commercial Fisheries; U.S. Corps of Engineers; Oregon State Fish Commission; Oregon State Game Commission; Oregon State Sanitary Authority; city of Corvallis; city of Portland; Eugene Water and Electric Board; Portland General Electric Co.; and Roseburg-Oregon Water Corporation.

EXPLANATION OF DATA

Station Descriptions

Each water-temperature record is preceded by a short description in which is given location of the measuring site, the drainage area at the site (if known), a short description of the records available, and a "Remarks" paragraph, if necessary. The number preceding the name of the station is the compilation number. These numbers run from 1 to 381 and are also used to designate sites on plate 1 (in pocket). Numbers shown parenthetically after the name of the station designate Geological Survey gaging stations in accordance with the national numbering system for such stations. Absence of this number means the site is other than a Geological Survey station.

Location

The measuring-site location is described in several ways--by latitude and longitude; by township and range; by physical features such as tributary streams, highway bridges, and towns; and by miles above mouth, where that information is readily available. River mileages have for the most part been taken from the various basin indexes prepared by the Columbia Basin Inter-Agency Committee, Subcommittee on Hydrology. Only preliminary un-checked figures for river mileage were available for the Rogue and Umpqua River basins, but these are believed to be reasonably accurate and subject to little change.

July 1993, 277. The following year, 1994, the first major oilfield was discovered in the northern part of the basin, the Tengiz field, which has become the largest oilfield in Kazakhstan.

Journal of Health Politics, Policy and Law

abnormal pre-embryos. In addition to genetic heterozygosity, mutations in the mitochondrial genome of zebrafish have affected the growth of individuals to the extent that they have been unable to reproduce. Mitochondria are the primary source of energy for all living organisms. They contain their own DNA which is passed down from mother to child. When there is a mutation in the mitochondrial DNA, it can lead to various health problems such as muscle weakness, blindness, deafness, and even death. In the case of zebrafish, the mutated mitochondrial DNA has been found to cause developmental abnormalities, including defects in pigmentation and growth retardation. This has led to concerns about the long-term effects of this mutation on the survival of the species.

Drainage Area

Drainage-area figures were available for all sites where data were collected by the Geological Survey; time and funds did not permit determination of drainage area at other sites. However, many of these other locations are between sites for which drainage areas have been determined and, therefore, the drainage areas can be estimated within rough limits.

Water-Temperature Records Available

This paragraph indicates the type of record and the period for which it was obtained. For spot-observation records, the number of spot observations made during the given period is listed and, where necessary, attention is called to any unusual distribution of the observations. In some instances, two or more agencies collected records at the same site, or practically the same site, and sometimes for the same period or overlapping periods. Such records are listed under one station description. In some instances, the Geological Survey made spot observations over a long period of years and, in addition, obtained a thermograph record for a year or two. There, too, both records are given, but generally when the thermograph record is at least 4 years in length, the spot-observation record is omitted.

the first time in 1992, and the second time in 1993. The first time, the government was asked to provide a grant to help build a new bridge across the river. The second time, the government was asked to provide a grant to help build a new bridge across the river.

1. In your response, give two examples of how the following situations might affect the way you think about yourself as a person. Explain how each situation has affected your self-concept. Your responses should be brief, but detailed enough to support your answer. You may use one or more of the following situations, or you may choose your own.

a. You have just been accepted to a college or university that you wanted to attend.

b. You have just graduated from high school and are starting college.

c. You have just graduated from high school and are starting a job.

d. You have just graduated from high school and are starting a job.

e. You have just graduated from high school and are starting a job.

f. You have just graduated from high school and are starting a job.

g. You have just graduated from high school and are starting a job.

h. You have just graduated from high school and are starting a job.

i. You have just graduated from high school and are starting a job.

j. You have just graduated from high school and are starting a job.

k. You have just graduated from high school and are starting a job.

l. You have just graduated from high school and are starting a job.

m. You have just graduated from high school and are starting a job.

n. You have just graduated from high school and are starting a job.

o. You have just graduated from high school and are starting a job.

p. You have just graduated from high school and are starting a job.

q. You have just graduated from high school and are starting a job.

r. You have just graduated from high school and are starting a job.

s. You have just graduated from high school and are starting a job.

t. You have just graduated from high school and are starting a job.

u. You have just graduated from high school and are starting a job.

v. You have just graduated from high school and are starting a job.

w. You have just graduated from high school and are starting a job.

x. You have just graduated from high school and are starting a job.

y. You have just graduated from high school and are starting a job.

z. You have just graduated from high school and are starting a job.

Remarks

In the "Remarks" paragraph, mention is made of regulation by reservoirs or powerplants that could conceivably affect water temperature. Also, credit is given to the agency that furnished the record; omission of such credit means that records were obtained by the Geological Survey.

Tables of Water-Temperature Data

The water temperatures shown for the various sites are in degrees Fahrenheit. Records furnished by the State Sanitary Authority were converted from the Celsius (centigrade) to the Fahrenheit scale for uniformity throughout. All tables are arranged in water-year form. The water year begins October 1 and ends September 30. Water year 1959, for example, extends from October 1958 to September 1959.

Thermograph Records

For thermograph records, the maximum, minimum, and mean water temperatures are listed for each month of each year. These data are then summarized for each month for the period of record. If a thermograph record was obtained prior to and subsequent to the construction of a reservoir immediately upstream, period-of-record means and extremes are computed for both periods to show the effect of the reservoir. In some instances, short gaps in the record are filled through correlation with another thermograph record. Where this is done, a footnote is used to designate the estimated temperatures and to show which record was used for correlation.

and the number of species per individual was compared at each of the three sites. The proportion of individuals with more than one species was also calculated.

de la grande époque de l'art contemporain, à celle de l'art officiel. Les deux œuvres sont toutefois très proches. Elles évoquent les « mythes » de la littérature et le temps perdu dans l'œuvre d'art. La sculpture de Gaudí est une œuvre d'art qui évoque les mythes de la littérature et le temps perdu dans l'œuvre d'art.

Spot-Observation Records

Where the spot observations are once daily or more frequent, the record is compiled just as for the thermograph records. All the other spot observations are generally made every 5 or 6 weeks and therefore it is not possible to compute observed monthly means and extremes for each month of each year.¹ Two sets of monthly means and extremes for the period of record are shown. The "observed" means and extremes are listed first, followed by the "adjusted" means and extremes. The individual spot observations themselves are not shown. A footnote to the table shows the thermograph record with which spot-observations were correlated to obtain the adjusted figures. (See open-file report on "Correlation and Analysis of Water-Temperature Data for Oregon Streams", by A. M. Moore, 1964.) A few records which include observations before and after the construction of an upstream reservoir have been split into two periods to show the effect of the reservoir.

{Consequently, the mean, maximum, and mean for the period of record is computed and shown for each calendar month.

Even though the spot observations were generally not made once each month, correlation with a thermograph record would have permitted the computation of "adjusted" means and extremes at the spot observation site for each month of each year for the period of record at the thermograph site. However, time and funds did not permit this. Also, period-of-record means and extremes probably are sufficient for most purposes.

第三章 第二節 セルフ・マネジメント

Note that, in general, the "adjusted" means and extremes shown for
the spot-observation sites are those that probably occurred during the
period of record for the thermograph with which the spot-observations
are correlated. This is because the adjusted period-of-record temperatures
at the spot-observation sites were obtained by entering the correlation
with the period-of-record monthly means and extremes for the thermograph.
Thus, if observed temperatures are correlated with Desolation Creek near
Dale, the adjusted figures represent probable monthly means and extremes
for the period 1951-58; where Middle Santiam River at mouth near Foster
was used, the adjusted figures are representative for the period 1954-62;
where Breitenbush River above Canyon Creek, near Detroit was used, the
adjusted figures are representative for the period 1951-62. One of these
three records was used for the correlations, and because all three records
include the cool summers of 1954 and 1955 and the warm summer of 1958, the
difference in periods of record is of little significance so far as
summer temperatures are concerned.

and the first time I have seen it. It is a very large tree, and the trunk is
about 10' in diameter. The bark is smooth and greyish-white, with some
horizontal markings. The leaves are large, dark green, and pointed.
The flowers are small, yellowish-green, and appear in clusters at the
ends of the branches. The fruit is a small, round, reddish-orange ball,
about the size of a cherry. The taste is sweet and slightly tart.
The tree is very tall and straight, reaching a height of about 30'
in the center of the forest. It is surrounded by many smaller trees
and shrubs, and the ground is covered with fallen leaves and pine needles.
The bark is smooth and greyish-white, with some horizontal markings.
The leaves are large, dark green, and pointed. The flowers are small,
yellowish-green, and appear in clusters at the ends of the branches.
The fruit is a small, round, reddish-orange ball, about the size of a

It is surrounded by many smaller trees and shrubs, and the ground
is covered with fallen leaves and pine needles.

For various reasons, "adjusted" temperatures are not shown for some streams. In some instances, this is because correlation with a thermograph record is so poor that improvement of the "observed" temperatures is not possible and a statement to this effect is included in the "Remarks" paragraph of the station description. In other instances, the monthly means and extremes based on the observed temperatures are so accurate that improvement through correlation is not possible. This latter condition frequently exists where large spring-flow contributions or releases from reservoirs result in relatively uniform water temperatures. Time of observation is not known for some of the records furnished by other agencies, and this is needed for a correlation in order to take into account the diurnal fluctuation of temperature. For all spot-observation sites for which adjusted temperatures are not shown, a reasonable approach is to assume that each monthly maximum could be about 2°F higher than the observed maximum temperature and that each monthly minimum, except those of 32° or 33°F, could be about 2°F lower than the observed minimum temperature. If there are a large number of observations, the observed means may be accurate within about 1°F.

WILLAMETTE RIVER BASIN

190-South Santiam River below Cascadia (14-1850.)

Location.--Lat 44°23'35", long 122°30'35", in SE $\frac{1}{4}$ sec.36, T.13 S., R.2 E., on right bank 100 ft downstream from bridge at Cascadia ranger station, 0.5 mile downstream from Mouse Creek, 0.5 mile upstream from Deer Creek, 1.5 miles southwest of Cascadia, and at mile 48.5.

Drainage area.--174 sq mi at gaging cable, 177 sq mi at gage.

Water-temperature records available.--122 spot observations January 1947 to September 1962 and thermograph record for July to September 1962.

+ Adjusted figures based on correlation with thermograph record for Breitenbush River above Canyon Creek, near Detroit.

Note.--Adjusted figures for both periods are generally representative of water temperatures for 1951-62; those for 1947-52 exclude, and those for 1953-62 include, effect of Detroit Reservoir.

201-Santiam River at Highway 99 Bridge, near Jefferson

Location.--Lat $44^{\circ}44'15''$, long $123^{\circ}03'05''$, in sec.4, T.10 S., R.3 W., 2.4 miles northwest of Jefferson and at mile 6.4.

Water-temperature records available.--35 spot observations, July to September only, 1950-61. No observations were made in 1956 and 1957.

Remarks.--Records furnished by State Sanitary Authority. Flow regulated since January 1953 by Detroit Reservoir.

		Water temperature ($^{\circ}$ F)

PUBLICATIONS--Reports prepared in the Oregon District

Under separate cover, this office is sending two copies of each of the following reports reproduced locally for open-file release, copies of which have not been previously sent for your file:

Compilation of Water-Temperature Data for Oregon Streams
Evaporation Study at Warm Springs Reservoir, Oregon
Selected Flow Characteristics of Streams in the Willamette River Basin, Oregon
Water Supply for Oregon Caves National Monument, Southwestern Oregon
U.S. Geological Survey Water-Quality Data in the Willamette Basin, Oregon, 1910-64
Floods of December 1964 in the Far Western States
Selected Ground Water Data in the Zola-Amity Hills Area, Northern Willamette Valley, Oregon
Records of Wells and Springs, Water Levels and Chemical Quality of Ground Water in the East Portland Area, Oregon
Pacific Northwest Economic Base Study for Power Markets, v. II, pt. 10, The Role of Water in Shaping the Economy of the Pacific Northwest

A number of additional copies of the first three publications are available if your office or some other branch of the Washington office has need of them.

COMPILATION OF WATER-TEMPERATURE DATA FOR OREGON STREAMS

--

By A. M. Moore

--

INTRODUCTION

Practically all water-temperature data collected through September 30, 1962, by various agencies, both public and private, are presented herein. Only those records with so few observations as to be of no significant value have been omitted.

Through the 1962 water year, the Geological Survey has collected up to 16 years of spot-observation data (periodic measurements) at more than 200 sites and 1 or more years of thermograph records at 55 sites. Some thermograph records that began as early as 1950 are still being collected and more than 55 records are being collected currently. However, about 25 of these records were begun during the summer of 1963 and are therefore not included in this compilation.

Through 1962, other agencies have collected more than 70 thermograph records and about as many spot-observation records. Many of the thermograph records, however, are only a few months to a year in length.

The thermograph records collected by the Geological Survey have been published through 1958 in the annual series of water-supply papers, "Quality of Surface Waters of the United States". Beginning with records for 1962, the Geological Survey in Oregon is publishing thermograph records, along with discharge records for the same site, in the annual statewide report.

The temperature records for 1959-61 will eventually be published in the annual water-supply papers on quality of water, but meanwhile this open-file compilation will serve to make available the monthly figures of water temperature at thermograph sites.

Most of the thermograph and spot-observation records collected by other agencies have never been published, and the same is true for all spot observations made by the Geological Survey. This compilation does not show daily temperatures or individual observations because their inclusion would greatly increase the size of the report and because mean monthly temperatures and monthly extremes of temperature are believed to be of more significance.

The report was prepared under the general supervision of R. B. Sanderson, District Engineer, in charge of surface-water investigations in Oregon. E. H. Stolte assisted in the preparation of manuscript descriptions for the various observation sites.

COOPERATION

Financial assistance in the preparation of this report was furnished by: Oregon State Water Resources Board; U.S. Bureau of Reclamation; U.S. Corps of Engineers; U.S. Public Health Service; and U.S. Soil Conservation Service.

Some records included in this report were furnished by: U.S. Fish and Wildlife Service, Bureau of Commercial Fisheries; U.S. Corps of Engineers; Oregon State Fish Commission; Oregon State Game Commission; Oregon State Sanitary Authority; city of Corvallis; city of Portland; Eugene Water and Electric Board; Portland General Electric Co.; and Roseburg-Oregon Water Corporation.

EXPLANATION OF DATA

Station Descriptions

Each water-temperature record is preceded by a short description in which is given location of the measuring site, the drainage area at the site (if known), a short description of the records available, and a "Remarks" paragraph, if necessary. The number preceding the name of the station is the compilation number. These numbers run from 1 to 381 and are also used to designate sites on plate 1 (in pocket). Numbers shown parenthetically after the name of the station designate Geological Survey gaging stations in accordance with the national numbering system for such stations. Absence of this number means the site is other than a Geological Survey station.

Location

The measuring-site location is described in several ways--by latitude and longitude; by township and range; by physical features such as tributary streams, highway bridges, and towns; and by miles above mouth, where that information is readily available. River mileages have for the most part been taken from the various basin indexes prepared by the Columbia Basin Inter-Agency Committee, Subcommittee on Hydrology. Only preliminary unchecked figures for river mileage were available for the Rogue and Umpqua River basins, but these are believed to be reasonably accurate and subject to little change.

Drainage Area

Drainage-area figures were available for all sites where data were collected by the Geological Survey; time and funds did not permit determination of drainage area at other sites. However, many of these other locations are between sites for which drainage areas have been determined and, therefore, the drainage areas can be estimated within rough limits.

Water-Temperature Records Available

This paragraph indicates the type of record and the period for which it was obtained. For spot-observation records, the number of spot observations made during the given period is listed and, where necessary, attention is called to any unusual distribution of the observations. In some instances, two or more agencies collected records at the same site, or practically the same site, and sometimes for the same period or overlapping periods. Such records are listed under one station description. In some instances, the Geological Survey made spot observations over a long period of years and, in addition, obtained a thermograph record for a year or two. There, too, both records are given, but generally when the thermograph record is at least 4 years in length, the spot-observation record is omitted.

Remarks

In the "Remarks" paragraph, mention is made of regulation by reservoirs or powerplants that could conceivably affect water temperature. Also, credit is given to the agency that furnished the record; omission of such credit means that records were obtained by the Geological Survey.

Tables of Water-Temperature Data

The water temperatures shown for the various sites are in degrees Fahrenheit. Records furnished by the State Sanitary Authority were converted from the Celsius (centigrade) to the Fahrenheit scale for uniformity throughout. All tables are arranged in water-year form. The water year begins October 1 and ends September 30. Water year 1959, for example, extends from October 1958 to September 1959.

Thermograph Records

For thermograph records, the maximum, minimum, and mean water temperatures are listed for each month of each year. These data are then summarized for each month for the period of record. If thermograph records were obtained prior to and subsequent to the construction of a reservoir immediately upstream, period-of-record means and extremes are computed for both periods to show the effect of the reservoir. In some instances, short gaps in the record are filled through correlation with another thermograph record. Where this is done, a footnote is used to designate the estimated temperatures and to show which record was used for correlation.

Spot-Observation Records

Where the spot observations are once daily or more frequent, the record is compiled just as for the thermograph records. All the other spot observations are generally made every 5 or 6 weeks and therefore it is not possible to compute observed monthly means and extremes for each month of each year. Consequently, the maximum, minimum and mean for the period of record is computed and shown by calendar month. Two sets of monthly means and extremes for the period of record are shown. The "observed" means and extremes are listed first, followed by the "adjusted" means and extremes. The individual spot observations themselves are not shown. A footnote to the table shows the thermograph record with which spot observations were correlated to obtain the adjusted figures. (See open-file report on "Correlation and Analysis of Water-Temperature Data for Oregon Streams", by A. M. Moore, 1964.) A few records which include observations before and after the construction of an upstream reservoir have been split into two periods to show the effect of the reservoir.

Even though the spot observations were generally not as frequent as once monthly, correlation with a thermograph record would have permitted the computation of "adjusted" means and extremes at the spot-observation sites for each month of each year for the period of record at the thermograph site. However, time and funds did not permit this. Also, period-of-record means and extremes probably are sufficient for most purposes.

Note that, in general, the "adjusted" means and extremes shown for
the spot-observation sites are those that probably occurred during the
period of record for the thermograph with which the spot observations
are correlated. This is because the adjusted period-of-record temperatures
at the spot-observation sites were obtained by entering the correlation
with the period-of-record monthly means and extremes for the thermograph.
Thus, if observed temperatures are correlated with Desolation Creek near
Dale, the adjusted figures represent probable monthly means and extremes
for the period 1951-58; where Middle Santiam River at mouth near Foster
was used, the adjusted figures are representative for the period 1954-62;
where Breitenbush River above Canyon Creek, near Detroit was used, the
adjusted figures are representative for the period 1951-62. One of these
three records was used for the correlations, and because all three records
include the cool summers of 1954 and 1955 and the warm summer of 1958,
the difference in periods of record is of little significance so far as
summer temperatures are concerned.

For various reasons, "adjusted" temperatures are not shown for some streams. In some instances, this is because correlation with a thermograph record is so poor that improvement of the "observed" temperatures is not possible and a statement to this effect is included in the "Remarks" paragraph of the station description. In other instances, the monthly means and extremes based on observed temperatures are so accurate that improvement through correlation is not possible. This latter condition frequently exists where large spring-flow contributions or releases from reservoirs result in relatively uniform water temperatures. Time of observation is not known for some of the records furnished by other agencies and this is needed for a correlation in order to take into account the diurnal fluctuation of temperature. For all spot-observation sites for which adjusted temperatures are not shown, a reasonable approach is to assume that each monthly maximum could be about 2°F higher than the observed maximum temperature and that each monthly minimum, except those of 32° or 33°F, could be about 2°F lower than the observed minimum temperature. If there are a large number of observations, the observed means may be accurate within about 1°F.

MALHEUR AND HARNEY LAKES BASIN

1-Silvies River near Burns (10-3935.)

Location.--Lat 43°43', long 119°11', in NW $\frac{1}{4}$ sec.31, T.21 S., R.30 E., on left bank 5 miles downstream from Emigrant Creek and 11 miles northwest of Burns.

Drainage area.--934 sq mi.

Water-temperature records available.--62 spot observations October 1954 to September 1962.

+ Adjusted figures based on correlation with thermograph record for Desolation Creek near Dale.

KLAMATH RIVER BASIN

6-Crooked Creek near Klamath Agency

Location.--Lat $42^{\circ}39'05''$, long $121^{\circ}56'50''$, in NE $\frac{1}{4}$ SW $\frac{1}{4}$ sec.1, T.33 S., R.7 $\frac{1}{2}$ E., at fish hatchery 2.3 miles north of Klamath Agency and 4.4 miles southeast of Fort Klamath.

Water-temperature records available.--Thrice-daily observations (6 a.m., 12 m., and 6 p.m.) January 1943 to January 1945.

Remarks.--Records furnished by Oregon State Game Commission. Crooked Creek arises from several springs at the hatchery and a few miles above.

		Water temperature ($^{\circ}$ F)

9-Sprague River near Chiloquin (11-5010.)

Location.--Lat $42^{\circ}35'05''$, long $121^{\circ}50'55''$, in NE $\frac{1}{4}$ NW $\frac{1}{4}$ sec.35, T.34 S., R.7 E., on right bank 1.0 mile northeast of Chiloquin, 4.6 miles upstream from Modoc Point Canal intake, and 5.4 miles upstream from mouth.

Drainage area.--1,580 sq mi, approximately.

Water-temperature records available.--96 spot observations June 1947 to May 1958, May 1960 to September 1962.

Remarks.--Regulation of flow by ponding at irrigation dams. Correlation with thermograph records is so poor that only observed temperatures are published.

Water temperature ($^{\circ}\text{F}$)

		Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.

10-Williamson River below Sprague River, near Chiloquin (11-5025.)

Location.--Lat $42^{\circ}34'15''$, long $121^{\circ}52'35''$, in NE $\frac{1}{4}$ NE $\frac{1}{4}$ sec.4, T.35 S., R.7 E., on right bank 0.2 mile downstream from Sprague River and 0.8 mile southwest of Chiloquin.

Drainage area.--3,000 sq mi, approximately.

Water-temperature records available.--65 spot observations at left bank July 1947 to May 1958; 86 spot observations at right bank July 1941 to May 1958 and December 1959 to September 1962.

Remarks.--Some regulation by diversion dams and logpond operations on Sprague River. Sprague River water is not completely mixed with Williamson River water when it passes gaging station. For this reason temperatures are listed for both right bank and left bank. Left bank temperature is more representative of Sprague River.

11-Keno Canal at Klamath Falls (11-5065.)

Location.--Lat $42^{\circ}13'$, long $121^{\circ}48'$, in SW $\frac{1}{4}$ sec.32, T.38 S., R.9 E., at Klamath Falls, 300 ft above penstock to powerplant; at canal spillway on right bank of Link River, a quarter of a mile above Link River bridge, opposite gaging station on Link River.

Water-temperature records available.--72 spot observations July 1947 to September 1962. No observations were made January to December 1958, and August 1959 to April 1960.

Remarks.--Pacific Power and Light Co. diverts into canal at storage dam three-quarters of a mile upstream. Regulated to supply water necessary for powerplant just below gage.

KLAMATH RIVER BASIN

12-Link River at Klamath Falls (11-5075.)

Location.--Lat $42^{\circ}13'25''$, long $121^{\circ}47'35''$, in SW $\frac{1}{4}$ NW $\frac{1}{4}$ sec.32, T.38 S., R.9 E., on left bank 600 ft upstream from outlet of Keno Canal and 0.4 mile upstream from Main Street Bridge (U.S. Highway 97) at Klamath Falls.

Drainage area.--3,810 sq mi, approximately, including 27 sq mi in closed basin of Crater Lake.

Water-temperature records available.--93 spot observations July 1947 to September 1962.

Remarks.--Flow regulated since April 1919 by Upper Klamath Lake. Large diurnal fluctuation in flow caused by powerplant above station.

OWYHEE RIVER BASIN

15-Owyhee River near Rome (13-1810.)

Location.--Lat $42^{\circ}52'$, long $117^{\circ}39'$, in NE $\frac{1}{4}$ sec.14, T.31 S., R.41 E., on right bank half a mile downstream from Jordan Creek and 2 $\frac{1}{2}$ miles north of Rome.

Drainage area.--About 8,000 sq mi.

Water-temperature records available.--59 spot observations August 1955 to September 1962.

Remarks.--Flow regulated by Antelope Reservoir, Wild Horse Reservoir, and numerous small reservoirs.

		Water temperature ($^{\circ}$ F)											
		Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.
Observed	Mean	52	41	34	33	40	45	50	63	73	78	75	69

† Adjusted figures based on correlation with thermograph record for Desolation Creek near Dale.

17-Malheur River below Warm Springs Reservoir, near Riverside (13-2150.)

Location.--Lat 43°34', long 118°12', in SW $\frac{1}{4}$ sec.17, T.23 S., R.37 E., on left bank 1 mile downstream from Warm Springs Dam, 3 miles upstream from South Fork, and 4 miles northwest of Riverside.

Drainage area.--1,100 sq mi, approximately.

Water-temperature records available.--13 spot observations (April to September) 1949 to 1955 and 17 spot observations (April to September) 1958-62. No spot observations were made October to March as during those months flow consists only of small amounts of leakage from Warm Springs Reservoir.

Remarks.--Flow completely regulated since November 1919 by Warm Springs Reservoir.

		Water temperature (°F)											
Observed		Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.

SNAKE RIVER MAIN STEM

32-Snake River at Brownlee Dam, Idaho-Oregon State line

Location.--Lat $44^{\circ}50'10''$, long $116^{\circ}54'00''$, in SE $\frac{1}{4}$ sec.2, T.17 N., R.5 W., Boise Base Line and Meridian, at Brownlee Dam, 1.1 miles upstream from Wildhorse River, $3\frac{1}{2}$ miles downstream from Brownlee Creek, $10\frac{1}{2}$ miles east of Halfway, Oreg., and at mile 145.2 from Lewiston, Idaho.

Drainage area.--72,590 sq mi, approximately.

Water-temperature records available.--Thermograph record October 1956 to December 1959. Prior to January 1958, record obtained about a quarter of a mile downstream.

Remarks.--Records furnished by U.S. Fish and Wildlife Service. Flow regulated by Brownlee Reservoir beginning in 1958 and by many other reservoirs above station.

a Computed on basis of available record and correlation with thermograph record for Umatilla River above Meacham Creek near Gibbon.

COLUMBIA RIVER MAIN STEM

60-Columbia River at McNary Dam, near Umatilla

Location.--Lat $45^{\circ}56'00''$, long $119^{\circ}17'50''$, in powerhouse near left bank just upstream from turbines about 2.5 miles east northeast of Umatilla, at mile 292.0.

Drainage area.--214,000 sq mi, approximately.

Water-temperature records available.--Once-daily observations at midnight January 1957 to September 1962, at turbine scroll case at elevation 267 ft.

Remarks.--Record furnished by Corps of Engineers. Some regulation by Franklin D. Roosevelt Lake and by reservoirs in Kootenai, Flathead, Pend Oreille, Spokane, Chelan, Yakima, and Snake River basins. Water temperatures may be affected by use of water as a coolant at Hanford.

DESCHUTES RIVER BASIN

79-Fall River near Lapine

Location.--Lat 43°47'50", long 121°34'20", in NW $\frac{1}{4}$ sec.31, T.20 S., R.10 E., at fish hatchery, about 50 feet upstream from U.S. Geological Survey gaging station, and 9 miles northwest of Lapine.

Drainage area.--45.1 sq mi, hydrologic drainage boundary uncertain owing to ground-water exchange.

Water-temperature records available.--Three observations daily (6 a.m., 12 m., and 6 p.m.) May 1945 to December 1946; once-daily thereafter (1 p.m.). Records incomplete or missing October 1947 to December 1948.

Remarks.--Records furnished by Oregon State Game Commission. Diversion point is a quarter of a mile upstream from hatchery.

DESCHUTES RIVER BASIN

80-Deschutes River near Culver (14-765.)

Location.--Lat $44^{\circ}29'40''$, long $121^{\circ}19'30''$, in NE $\frac{1}{4}$ NW $\frac{1}{4}$ sec.32, T.12 S., R.12 E., on right bank 2.5 miles downstream from Squaw Creek, 6.0 miles southwest of Culver, and at mile 120.6. Prior to Oct. 1, 1961, at site 3.9 miles downstream.

Drainage area.--2,705 sq mi.

Water-temperature records available.--Thermograph record September 1952 to September 1957, January 1959 to August 1961, July to September 1962.

91-Metolius River near Grandview (14-915.)

Location.--Lat 44°36'40", long 121°27'10", in NE $\frac{1}{4}$ NE $\frac{1}{4}$ sec.19, T.11 S., R.11 E., on right bank 0.7 mile upstream from Street Creek, 7.5 miles northwest of Grandview, and 13 miles northwest of Culver.

Drainage area.--324 sq mi, hydrologic drainage boundary uncertain owing to ground-water exchange.

Water-temperature records available.--Thermograph record July 1952 to September 1962.

Remarks.--Stream is spring fed.

DESCHUTES RIVER BASIN

95-Oak Springs near Maupin

Location--Lat 45°13'20", long 121°05'00", in sec.17, T.4 S., R.14 E., at fish hatchery 3 miles north of Maupin and 5 miles southeast of Tygh Valley.

Water-temperature records available--Thrice-daily observations (6 a.m., 12 m., and 6 p.m.) January 1943 to January 1945.

Remarks--Records furnished by Oregon State Game Commission. Although the hatchery is on the banks of the Deschutes River, water for the hatchery is obtained from hillside springs.

COLUMBIA RIVER MAIN STEM

100-Columbia River near The Dalles

Location--Lat 45°37'10", long 121°07'15", in NW $\frac{1}{4}$ sec.31, T.2 N., R.14 E., at The Dalles Dam east fish ladder 2.6 miles northeast of The Dalles, 3.2 miles upstream from U.S. Geological Survey stream-gaging station, and at mile 191.5.

Drainage area--237,000 sq mi, approximately (at gaging station at The Dalles).

Water-temperature records available--Once-daily observations October 1958 to September 1962.

Remarks--Some regulation of flow by Franklin D. Roosevelt Lake and by reservoirs in Kootenai, Flathead, Pend Oreille, Spokane, Chelan, Yakima, and Snake River basins. Water temperatures may be affected by use of water as a coolant at Hanford.

107-Hood River near Hood River (14-1210.)

Location.--Lat 45°42'00", long 121°30'30", in NW $\frac{1}{4}$ SE $\frac{1}{4}$ sec.36, T.3 N., R.10 E., on right bank at Powerdale, 0.5 mile upstream from Pacific Power & Light Co. powerplant, and 0.8 mile southeast of town of Hood River.

Drainage area.--329 sq mi.

Water-temperature records available.--130 spot observations May 1947 to September 1962.

Remarks.--Daily discharge regulated by pondage at sawmill at Dee.

COLUMBIA RIVER MAIN STEM

108-Columbia River at Bonneville Dam.

Location.--Lat 45°38'20", long 121°56'45", in sec.21, T.2 N., R.7 E., in forebay of Dam, 0.7 mile downstream from Eagle Creek, and at mile 145.6.

Water-temperature records available.--Thermograph record January 1948 to September 1960. Once-daily observations October 1960 to September 1962.

Remarks.--Some regulation by Franklin D. Roosevelt Lake and by reservoirs in Kootenai, Flathead, Pend Oreille, Spokane, Chelan, Yakima, and Snake River basins. Records furnished by Corps of Engineers. Water temperatures may be affected by use of water as a coolant at Hanford.

113-Bull Run River at city of Portland headworks, near Bull Run

Location.--Lat 45°27'00", long 122°09'00", in SE $\frac{1}{4}$ sec.26, T.1 S., R.5 E., on left bank in forebay at headworks 1,500 ft below Bull Run Reservoir No. 2 and 4.8 miles downstream from Lake Ben Morrow.

Drainage area.--107 sq mi, at gaging station 1.8 miles downstream.

Water-temperature records available.--Thrice-daily observations at 12 m., 6 p.m., and 12 p.m., March 1932 to September 1962.

Remarks.--Flow regulated by Bull Run Lake and by Lake Ben Morrow and since 1961 by Bull Run Reservoir No. 2. Record furnished by Portland Water Bureau. Undoubtedly the upstream reservoirs can and do affect water temperature at this site and summer-time spill pattern is not the same from year to year.

SANDY RIVER BASIN

114-Bull Run River near Bull Run (new site) (14-1400.)

Location.--Lat $45^{\circ}26'15''$, long $122^{\circ}10'40''$, in NE $\frac{1}{4}$ SW $\frac{1}{4}$ sec.34, T.1 S., R.5 E., on left bank 1.8 miles downstream from Bull Run Reservoir No. 2, and 2.7 miles northeast of Bull Run.

Drainage area.--107 sq mi.

Water-temperature records available.--44 spot observations August 1957 to September 1962.

Remarks.--Flow regulated by Bull Run Lake, and Lake Ben Morrow, and by Bull Run Reservoir No. 2, since December 1961. This site differ from the old site (see preceding record) in that the record is obtained below the diversion for city of Portland. The few observations made since regulation by Bull Run Reservoir No. 2 began seem to indicate no large effect on water temperature by that reservoir

116-Bull Run River at Bull Run (14-1420.)

Location.--Lat $45^{\circ}26'00''$, long $122^{\circ}14'05''$, in NE $\frac{1}{4}$ sec.6, T.2 S., R.5 E., on left bank at Bull Run, 450 ft downstream from tailrace of Portland General Electric Co.'s powerplant, 1.5 miles downstream from Little Sandy River, and 1.5 miles above mouth.

Drainage area.--136 sq mi.

Water-temperature records available.--Thermograph record August 1950 to September 1954.

Remarks.--Low and medium flows largely regulated by Portland General Electric Co.'s powerplant but only slight regulation at extreme high flows.

a Computed on basis of available record and correlation with thermograph record for Green Point Creek below North Fork, near Dee.

117-Sandy River below Bull Run River, near Bull Run (14-1425.)

Location.--Lat $45^{\circ}27'20''$, long $122^{\circ}14'45''$, in SW $\frac{1}{4}$ NW $\frac{1}{4}$ sec.30, T.1 S., R.5 E., on left bank 0.9 mile downstream from Bull Run River and 2.0 miles northwest of Bull Run.

Drainage area.--440 sq mi.

Water-temperature records available.--117 spot observations June 1947 to September 1962.

Remarks.--Flow regulated by Bull Run Lake and Lake Ben Morrow and since December 1961 by Bull Run Reservoir No. 2. Considerable diurnal fluctuation of flow caused by Bull Run powerplant of Portland General Electric Co.

	Max.-Min.	70 48	52 40	45 43	43 40	a44 a40	45 40	48 41	49 44	49 45	51 47	54 48	56 50

a Computed on basis of available record and correlation with thermograph record for Middle Fork Willamette River below North Fork, near Oakridge.

Note.--High temperatures of September and October 1961 resulted from cutting flow to a trickle when gates were closed at Hills Creek Dam to allow reservoir to fill.

Figures for 1961 and 1962 are not combined to give period of record means and ranges, because of the change in regimen.

WILLAMETTE RIVER BASIN

125-Waldo Lake outlet near Oakridge (14-1470.)

Location.--Lat 43°46'05", long 122°03'10", in SE $\frac{1}{4}$ NW $\frac{1}{4}$ sec.7, T.21 S., R.6 E., on left bank of artificial outlet channel of Waldo Lake, 20 miles east of Oakridge, at mile 43.5 on North Fork Middle Fork Willamette River.

Drainage area.--30 sq mi, approximately.

Water-temperature records available.--25 spot observations April 1947 to October 1953 with only the months of October, March, July and August having more than 2 observations.

† Adjusted figures based on correlation with thermograph record for Middle Santiam River at mouth, near Foster.

128-Middle Fork Willamette River below North Fork, near Oakridge (14-1480.)

Location.--Lat $43^{\circ}48'05''$, long $122^{\circ}33'35''$, in SW $\frac{1}{4}$ sec. 27, T.20 S., R.2 E., on left bank 0.5 mile downstream from Whitehead Creek, 4.2 miles downstream from North Fork of Middle Fork Willamette River, 7 miles northwest of Oakridge, and at mile 220.2.

Drainage area.--924 sq mi.

Water-temperature records available.--Thermograph record September 1950 to October 1960, June 1961 to September 1962.

Remarks.--Flow regulated since 1961, by Hills Creek Reservoir; slight regulation at times by log ponds above station.

a Computed on basis of available record and correlation with thermograph record for Fall Creek below Winberry Creek near Fall Creek.
Note.--1962 not included in period-of-record figures because of effect of regulation by Hills Creek Reservoir.

129-Middle Fork Willamette River near Dexter (14-1500.)

Location.--Lat $43^{\circ}56'45''$, long $122^{\circ}50'10''$, near center of sec. 5, T.19 S., R.1 W., on right bank 0.6 mile upstream from Lost Creek, 2 miles northwest of Dexter, 2.7 miles downstream from Dexter Dam, and at mile 201.2.

Drainage area.--1,001 sq mi.

Water-temperature records available.--Thermograph record May 1950 to September 1954, September 1955 to September 1962. Record prior to 1955 obtained at site 4 miles upstream and that for October 1950 to September 1954 published as "at Lowell".

Remarks.--Flow regulated since November 1953 by Lookout Point Reservoir and since August 1961 by Hills Creek Reservoir. Record May to September 1950 furnished by U.S. Fish and Wildlife Service.

Note.--Storage began in Lookout Point Reservoir in November 1953.

WILLAMETTE RIVER BASIN

130-Fall Creek below Winberry Creek, near Fall Creek (14-1510.)

Location.--Lat $43^{\circ}56'40''$, long $122^{\circ}46'25''$, in NW $\frac{1}{4}$ SE $\frac{1}{4}$ sec.2, T.19 S., R.1 W., on left bank 10 ft upstream from highway bridge, 1.6 miles downstream from Winberry Creek, 2.3 miles southeast of town of Fall Creek, and at mile 6.1.

Drainage area.--186 sq mi.

Water-temperature records available.--Thermograph record August 1950 to September 1962.

131-Middle Fork Willamette River at Jasper (14-1520.)

Location.--Lat $43^{\circ}59'55''$, long $122^{\circ}54'20''$, in SW $\frac{1}{4}$ SW $\frac{1}{4}$ sec.14, T.18 S., R.2 W., on right bank 25 ft downstream from highway bridge at Jasper, 650 feet downstream from Hills Creek, and at mile 195.0.

Drainage area.--1,340 sq mi.

Water-temperature records available.--Thermograph record October 1953 to September 1962. Eleven spot observations of water temperature July to September 1950-53, except no observations in 1952; 21 spot observations July to September 1954-59.

Remarks.--Flow regulated since November 1953 by Lookout Point Reservoir and since August 1961 by Hills Creek Reservoir. Spot observations furnished by State Sanitary Authority.

133-Coast Fork Willamette River below Cottage Grove Dam (14-1535.)

Location.--Lat 43°43'15", long 123°02'55", in NE $\frac{1}{4}$ sec.28, T.21 S., R.3 W., on right bank at bridge 0.3 mile downstream from Cottage Grove Dam, 5 $\frac{1}{2}$ miles south of Cottage Grove, and at mile 29.4.

Drainage area.--104 sq mi.

Water-temperature records available.--119 spot observations June 1947 to September 1962. Thermograph record June to September 1950 on spillway wall of dam.

Remarks.--Flow regulated since 1942 by Cottage Grove Reservoir. Thermograph record furnished by U.S. Fish and Wildlife Service.

Water temperature (°F)														
		Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	
1950	Mean	-	-	-	-	-	-	-	-	51	53	55	61	
	Max.-Min.	-	-	-	-	-	-	-	-	55 49	56 51	58 53	65 55	

Note.--No attempt made to correlate observed temperatures with a thermograph record; site too close to dam to allow good correlation.

134-Coast Fork Willamette River above Cottage Grove

Location - Lat. $43^{\circ}00'50''$, long. $123^{\circ}04'30''$, in sec. 9, T. 21 S., R. 3 W., 2 miles south of Cottage Grove and at mile 25.

Water temperature records available --32 spot observations, July to September only, 1950-59. No observations were made in 1952.

Remarks: Records furnished by State Sanitary Authority. Flow regulated by Cottage Grove Reservoir.

WILLAMETTE RIVER BASIN

135-Row River above Pitcher Creek, near Dorena (14-1545.)

Location.--Lat $43^{\circ}44'10''$, long $122^{\circ}52'20''$, in NE $\frac{1}{4}$ sec.24, T.21 S., R.2 W., on right bank 0.5 mile upstream from Pitcher Creek, 1.2 miles northwest of Dorena, and at mile 13.2.

Drainage area.--211 sq mi.

Water-temperature records available.--129 spot observations January 1947 to September 1962. Thermograph record June to December 1950.

Remarks.--Occasional fluctuation of flow caused by upstream logponds. Thermograph record furnished by U.S. Fish and Wildlife Service.

WILLAMETTE RIVER BASIN

55

138-Row River at Highway 99 Bridge, near Cottage Grove.

Location.--Lat 43°48'45", long 123°02'20", in sec.22, T.20 S., R.3 W., 1 mile northeast of Cottage Grove and at mile 0.7.

Water-temperature records available.--32 spot observations, July to September only, 1950-59. No observations were made in 1952.

Remarks.--Records furnished by State Sanitary Authority. Flow regulated by Dorena Reservoir.

139-Coast Fork Willamette River at Saginaw Bridge, at Saginaw

Location.--Lat 43°50'00", long 123°02'30", in sec.15, T.20 S., R.3 W. 0.2 mile east of Saginaw and at mile 20.

Water-temperature records available.--28 spot observations, July to September only, 1950-58. No observations were made in 1952.

Remarks.--Records furnished by State Sanitary Authority. Flow regulated by Dorena and Cottage Grove Reservoirs.

140-Coast Fork Willamette River near Goshen (14-1575.)

Location.—Lat. 43° 58' 50", long 122° 57' 55", in NW sec. 29, T. 18 S., R. 2 W., on right bank at downstream side of bridge on State Highway 58, 2.5 miles southeast of Goshen, and at mile 6.4

Drainage area.--642 sq mi.

Water-temperature records available.--100 spot observations August 1950 to September 1962 and thermograph record from August 1961 to September 1962. Also, State Sanitary Authority obtained 32 spot observations July to September only. 1950-59.

Remarks.--Flow regulated by Cottage Grove and Dorena Reservoirs. Because there is only about 1 year of thermograph record available the spot observation data is published, also. Records for 1950-59 furnished by State Sanitary Authority.

142-Willamette River at Ferry Street Bridge, at Eugene

Location.--Lat 44°03'30", long 123°05'00", in sec. 29, T.17 S., R.3 W., at Eugene, and at mile 182.2.

Water-temperature records available.--33 spot observations, July to September only, 1950-59 (no observations in 1952). Also, hourly observations June to October 1950 at Eugene Water and Electric Board steamplant about 0.5 mile upstream.

Remarks.--Flow regulated by Cottage Grove and Dorena Reservoirs and, since November 1953, by Lookout Point Reservoir. Spot-temperature records furnished by State Sanitary Authority. Hourly temperature records for 1950 furnished by Eugene Water & Electric Board.

143-Willamette River at Willamette Sand and Gravel Company, near Eugene

Location.--Lat 44°05'45", long 123°06'20", in sec. 18, T. 17 S., R. 3 W., 4 miles north of Eugene and at mile 178.

Water-temperature records available.--32 spot observations. July to September only. 1950-59. No observations were made in 1952.

Remarks.--Flow regulated by Cottage Grove and Dorena Reservoirs and, since November 1953, by Lookout Point Reservoir. Records furnished by State Sanitary Authority.

144-Mckenzie River at outlet of Clear Lake (14-1585.)

Location.--Lat 44°21'40", long 121°59'40", in SE $\frac{1}{4}$ sec.8, T.14 S., R.7 E., on west bank of Clear Lake in narrow channel, 150 ft upstream from outlet, and at mile 89.6.

Drainage area.--92.4 sq mi.

Water-temperature records available.--99 spot observations October 1947 to September 1962.

Remarks.--Flow regulated by natural storage in Clear Lake.

156-Mckenzie River below Gate Creek, near Vida

Location.--Lat 44°08'30", long 122°36'25", in SE $\frac{1}{4}$ sec.30, T.16 S., R.2 E., at fish hatchery 1.7 miles west of Vida, 2.1 miles downstream from Gate Creek, and at mile 39.7.

Water-temperature records available.--Once-daily observations at 6 p.m. October 1953 to September 1962.

Remarks.--Records furnished by Oregon State Game Commission. Diversions is from a point 500 feet above Leaburg dam.

157-McKenzie River at Leaburg

Location.--SE $\frac{1}{4}$ sec.9, T.17 S., R.1 E., in canal just above Leaburg powerplant, half a mile below Leaburg, and at mile 38.8.

Water-temperature records available.--Spot observations generally once daily November 1944 to June 1950 and two or three times daily thereafter.

Remarks.--Records furnished by Eugene Water and Electric Board. Records obtained in canal about 4 miles below point of diversion at Leaburg Dam; pond above dam is so small and flow in canal so swift that temperatures are considered representative of river temperatures.

159-McKenzie River near Springfield (14-1640.)

Location.--Lat 44°03'20", long 122°49'45", near line between secs. 29 and 32, T. 17 S., R. 1 W., at Hendricks Bridge, at former U.S. Geological Survey gaging station 1.6 miles southwest of Walterville, 8 miles east of Springfield, and at mile 24.0.

Drainage area.--1,095 sq mi (revised).

Water-temperature records available.--Thermograph record May to December 1950.

Remarks.--Records furnished by U.S. Fish and Wildlife Service.

160-McKenzie River at Hayden Bridge, near Springfield

Location--Lat 44°04'20", long 122°57'45", in sec.20, T.17 S., R.2 W., 1.3 miles upstream from Mohawk River, 2.5 miles northeast of Springfield, and at mile 14.8.

Water-temperature records available.--33 spot observations, July to September only, 1950-59. No observations were made in 1952.

Remarks.--Records furnished by State Sanitary Authority.

WILLAMETTE RIVER BASIN

161-Mohawk River near Springfield (14-1650.)

Location.--Lat 44°06', long 122°57', in sec.17, T.17 S., R.2 W., on downstream side of bridge near midspan, 4½ miles northeast of Springfield, and at mile 1.6.

Drainage area.--177 sq mi.

Water-temperature records available.--30 spot observations September 1947 to October 1952.

Remarks.--Some regulation of low flows by log ponds.

162-McKenzie River at Old Ferry Crossing, near Springfield

Location.--Lat 44°04'50", long 122°59'30", in sec.24, T.17 S., R.3 W., 2 miles north of Springfield, 1.2 miles downstream from Mohawk River, and at mile 12.5.

Water-temperature records available.--27 spot observations, July to September only, 1951-59. No observations were made in 1952.

Remarks.--Record furnished by State Sanitary Authority.

163-McKenzie River near Coburg (14-1655.)

Location.--Lat 44°06'45", long 123°02'45", in NE $\frac{1}{4}$ NE $\frac{1}{4}$, sec.9, T.17 S., R.3 W., on left bank at downstream side of Armitage Bridge, 2 miles southeast of Coburg, at mile 7.1.

Drainage area.--1,337 sq mi.

Water-temperature records available.--127 spot observations December 1946 to September 1962. Also, State Sanitary Authority obtained 33 spot observations July to September only, 1950-59.

Remarks.--Slight diurnal fluctuation of flow caused by logponds and powerplants upstream. Water supply for city of Eugene is diverted 10 miles upstream.

WILLAMETTE RIVER MAIN STEM

65

164-Willamette River at Koon Sand and Gravel Plant, near Junction City

Location.--Lat 44°12'15", long 123°09'50", in sec.3, T.16 S., R.4 W., 2.3 miles southeast of Junction City and at mile 168.

Water-temperature records available.--29 spot observations, July to September only, 1950-58.

Remarks.--Flow regulated by Cottage Grove and Dorena Reservoirs and, since November 1953, by Lookout Point Reservoir. Records furnished by State Sanitary Authority.

165-Willamette River at Harrisburg (14-1660.)

Location.--Lat 44°16'05", long 123°10'20", in SW $\frac{1}{4}$ NE $\frac{1}{4}$ sec.16, T.15 S., R.4 W., on right bank 10 ft downstream from bridge on U.S. Highway 99 at Harrisburg at mile 161.2.

Drainage area.--3,420 sq mi, approximately.

Water-temperature records available.--126 spot observations December 1946 to September 1962 and thermograph record from July 1961 to September 1962. Also, State Sanitary Authority obtained 33 spot observations July to September only, 1950-59.

Remarks.--Flow regulated since 1942 by Cottage Grove Reservoir, since 1949 by Dorena Reservoir, since 1953 by Lookout Point Reservoir, and since 1961 by Hills Creek Reservoir.

172-Long Tom River near Monroe

Location.--Lat 44°22'25", long 123°15'35", in sec. 11, T. 14 S., R. 5 W., 4.5 miles northeast of Monroe and at mile 7.

Water-temperature records available.--30 spot observations, July to September only, 1950-59. No observations were made in 1952 and 1955.

Remarks.--Flow regulated by Fern Ridge Reservoir. Records furnished by State Sanitary Authority.

WILLAMETTE RIVER MAIN STEM

173-Willamette River near Corvallis

Location.--Lat 44°32'00", long 123°15'00", in NW₄NW₁ sec.13, T.12 S., R.5 W., at city of Corvallis treatment plant just north of Kiger Island. 2.5 miles southeast of Corvallis, and at mile 134.0.

Water-temperature records available.--Once-daily spot observations reasonably complete for June to September 1957-62; data for October to May of some years are fragmentary with very few observations in those months during water years 1960-62. Also, State Sanitary Authority obtained 35 spot observations, July to September only, 1950-60, at site 0.1 mile upstream.

Remarks.--Flow regulated since 1941 by Fern Ridge Reservoir, since 1942 by Cottage Grove Reservoir, since 1949 by Dorena Reservoir, since 1953 by Lookout Point Reservoir, and since 1961 by Hills Creek Reservoir. Records for 1957-62 furnished by city of Corvallis. Figures for individual months not shown for fragmentary record October to May and period-of-record figures shown for those months may not be representative of the period. Records for 1950-60 furnished by State Sanitary Authority.

+ Adjusted figures based on correlation with thermograph record for Middle Santiam River at mouth, near Foster.

178-Calapooya River at Albany (14-1735.)

Location.--Lat $44^{\circ}37'15''$, long $123^{\circ}07'40''$, in NW $\frac{1}{4}$ sec.13, T.11 S., R.4 W., near right bank on downstream side of bridge on Riverside Drive at Albany, 0.6 mile downstream from Oak Creek, and 3.0 miles upstream from mouth.

Drainage area.--372 sq mi.

Water-temperature records available.--99 spot observations December 1946 to September 1962.

Remarks.--Diurnal fluctuation of flow caused by ponds at flour mills near Shedd.

WILLAMETTE RIVER MAIN STEM

179-Willamette River at Albany (14-1740.)

Location.--Lat $44^{\circ}38'20''$, long $123^{\circ}06'20''$, in SW $\frac{1}{4}$ sec.6, T.11 S., R.3 W., on right bank 5 ft upstream from bridge on U.S. Highway 20 (Ellsworth Street) in Albany, 0.2 mile downstream from Calapooya River, and at mile 119.3.

Drainage area.--4,840 sq mi, approximately.

Water-temperature records available.--100 spot observations December 1946 to September 1962. Also, State Sanitary Authority obtained 43 spot observations, July to September only, 1950-61.

Remarks.--Flow regulated since 1941 by Fern Ridge Reservoir, since 1942 by Cottage Grove Reservoir, since 1949 by Dorena Reservoir, since 1953 by Lookout Point Reservoir, and since 1961 by Hills Creek Reservoir.

WILLAMETTE RIVER BASIN

185-North Santiam River at Niagara (14-1815.)

Location.--Lat 44°45'10", long 122°17'50", in NE $\frac{1}{4}$ NE $\frac{1}{4}$ sec.34, T.9 S., R.4 E., on left bank 0.1 mile downstream from Little Sardine Creek, 0.8 mile downstream from Big Cliff Dam, 2.1 miles east of Niagara, and at mile 57.3.

Drainage area.--453 sq mi; 438 sq mi at former site (above Mayflower Creek) 1,600 ft downstream from Detroit Dam.

Water-temperature records available.--Thermograph record May to October 1950, February 1953 to September 1962; 41 spot observations May 1947 to May 1953 at former site about 3.3 miles upstream.

Remarks.--Flow completely regulated since January 1953 by Detroit and Big Cliff Reservoirs. Spot-observation data represent natural flow conditions as does the 1950 thermograph record. Thermograph records for 1953-62 when compared with previous records show effect of Detroit Reservoir on water temperature. Thermograph record for 1950 furnished by U.S. Fish and Wildlife Service.

+ Adjusted figures based on correlation with thermograph record for Middle Santiam River at mouth, near Foster.

188-North Santiam River at Mehama (14-1830.)

Location.--Lat $44^{\circ}47'20''$, long $122^{\circ}37'00''$, in NW $\frac{1}{4}$ sec.18, T.9 S., R.2 E., on right bank 300 ft downstream from highway bridge at Mehama, 0.5 mile downstream from Little North Santiam River, and at mile 38.7.

Drainage area.--665 sq mi.

Water-temperature records available.--43 spot observations December 1946 to December 1952 and 72 spot observations January 1953 to September 1962.

Remarks.--Flow regulated since 1953 by Detroit Reservoir; record has been split, therefore, to show effect of reservoir.

		Water temperature ($^{\circ}$ F)

+ Adjusted figures based on correlation with thermograph record for Breitenbush River above Canyon Creek, near Detroit.

Note.--Adjusted figures for both periods are generally representative of water temperatures for 1951-62; those for 1947-52 exclude, and those for 1953-62 include, effect of Detroit Reservoir.

189-North Santiam River near Jefferson (14-1841.)

Location.--Lat $44^{\circ}42'30''$, long $122^{\circ}58'10''$, in SE $\frac{1}{4}$ sec.7, T.10 S., R.2 W., on left bank 5 ft downstream from Greens Bridge, 2 miles east of Jefferson, 3 miles upstream from confluence with South Santiam River, and at mile 14.6.

Drainage area.--736 sq mi.

Water-temperature records available.--30 spot observations June 1955 to September 1962. No observations during October 1960 to January 1962.

Remarks.--Flow regulated since 1953 by Detroit Reservoir and Big Cliff Reservoir. Salem and Stayton canals divert above station and some pumping diversions above station. Summer flow is less here than at station upstream at Mehama; this plus some return flow from irrigation results in appreciable warming of water between Mehama and Jefferson.

		Water temperature ($^{\circ}$ F)

WILLAMETTE RIVER BASIN

77

200-Santiam River at Jefferson (14-1890.)

Location.--Lat $44^{\circ}42'55''$, long $123^{\circ}00'40''$, in SE $\frac{1}{4}$ sec.11, T.10 S., R.3 W., on right bank 350 ft upstream from Southern Pacific railroad bridge at Jefferson, 2.0 miles downstream from confluence of North and South Santiam Rivers, and at mile 9.6.

Drainage area.--1,790 sq mi, approximately.

Water-temperature records available.--104 spot observations May 1947 to September 1962. Thermograph record May to October 1950 on U.S. Highway 99 E bridge about 400 ft downstream.

Remarks.--Flow regulated since 1953 by Detroit Reservoir; spot-observation record has been split, therefore, to show effect of reservoir. Thermograph record furnished by U.S. Fish and Wildlife Service.

WILLAMETTE RIVER BASIN

79

207-Rickreall Creek near Dallas (14-1907.)

Location.--Lat $44^{\circ}54'50''$, long $123^{\circ}23'20''$, in SE $\frac{1}{4}$ SW $\frac{1}{4}$ sec.35, T.7 S., R.6 W., on left bank 1.8 miles downstream from Canyon Creek, 3.5 miles west of Dallas, 5.1 miles downstream from Rickreall Creek Dam, and at mile 19.1.

Drainage area.--27.4 sq mi.

Water-temperature records available.--33 spot observations September 1957 to September 1962.

Remarks.--Low flow regulated since June 1960 by Rickreall Creek Reservoir; use summer temperature records with caution because there is not enough information to evaluate effect of reservoir on downstream water temperatures.

+ Adjusted figures based on correlation with thermograph record for Breitenbush River above Canyon Creek, near Detroit.

WILLAMETTE RIVER BASIN

221-Haskins Creek below reservoir, near McMinnville (14-1960.)

Location.--Lat 45°18'40", long 123°20'55", in NE $\frac{1}{4}$ sec.18, T.3 S., R.5 W., on right bank 800 ft downstream from dam of McMinnville water-supply reservoir, 11 miles northwest of McMinnville, and at mile 5.0.

Drainage area.--6.90 sq mi.

Water-temperature records available.--83 spot observations October 1951 to September 1962.

Remarks.--Flow regulated by Haskins Creek Reservoir. During winter months reservoir is empty except when inflow exceeds capacity of outlet tunnel, and normally the reservoir is filled in the spring and not drawn down appreciably until the fall.

WILLAMETTE RIVER MAIN STEM

224-Willamette River at Newberg Bridge, at Newberg

Location--Lat 45°17'05", long 122°57'40", in sec. 29, T.3 S., R.2 W., 1 mile south of Newberg and at mile 50.0.

Water-temperature records available.--158 spot observations were made 1950-62. Of these, 98 were made in the period July to September 1950-61. No observations were made October to June during the water years 1950-56.

Remarks.--Records furnished by State Sanitary Authority. Flow regulated by Fern Ridge, Cottage Grove, Dorena, Lookout Point, Detroit and Hills Creek Reservoirs.

WILLAMETTE RIVER MAIN STEM

225-Willamette River at Wilsonville (14-1980.)

Location.--Lat 45°17'31", long 122°46'05", in SE $\frac{1}{4}$ sec.23, T.3 S., R.1 W., on upstream side of pier of bridge on U.S. Highway 99 at Wilsonville, 1.3 miles downstream from Corral Creek, 2.8 miles upstream from Molalla River, and at mile 38.5.

Drainage area.--8,400 sq mi, approximately.

Water-temperature records available.--53 spot observations December 1948 to September 1962. Only five observations were made in the period from August 1957 to September 1962, and there were other periods ranging from 6 to 8 months when no observations were made.

Remarks.--Flow regulated by Fern Ridge and Cottage Grove Reservoirs, since 1949 by Dorena Reservoir, since 1953 by Lookout Point and Detroit Reservoirs, and since 1961 by Hills Creek Reservoir.

249-Clackamas River at Cazadero Dam

Location.--Lat $45^{\circ}15'08''$, long $122^{\circ}17'52''$, in SW $\frac{1}{4}$ NE $\frac{1}{4}$ sec.3, T.4 S., R.4 E., 1 mile upstream from Faraday Lake, 3 miles southeast of Estacada, and at mile 27.8.

Drainage area.--657 sq mi, at former gaging station "near Cazadero".

Water-temperature records available.--Once daily readings at about 8 a.m. from November 1957 to September 1962.

Remarks.--Large diurnal fluctuations and some regulation since 1958 by North Fork Dam. Minor regulation since 1956 by Timothy Lake. Records furnished by Portland General Electric Company.

250-Clackamas River at Estacada (14-2100.)

Location.--Lat $45^{\circ}18'00''$, long $122^{\circ}21'10''$, in NE $\frac{1}{4}$ sec.19, T.3 S., R.4 E., on left bank 0.2 mile downstream from River Mill Dam, 1.5 miles northwest of Estacada, and at mile 23.1.

Drainage area.--671 sq mi.

Water-temperature records available.--58 spot observations December 1947 to September 1962. Only three observations were made from December 1947 to January 1951, and only six, from August 1956 to September 1962.

Remarks.--Large diurnal fluctuations and some regulation caused by powerplants at River Mill Dam and, since 1958, by North Fork Dam. Minor regulation since 1956 by Timothy Lake.

TRASK RIVER BASIN

261-Trask River near Tillamook (14-3025.)

Location.--Lat 45°26'25", long 123°43'00", in NW $\frac{1}{4}$ NW $\frac{1}{4}$ sec.31, T.1 S., R.8 W., on right bank 0.6 mile upstream from Gold Creek and 6.2 miles east of Tillamook.

Drainage area.--145 sq mi.

Water-temperature records available.--Thermograph record May to September 1962. 77 spot observations January 1947 to July 1958, and 8 spot observations September 1961 to September 1962. No observations were made September 1956 to August 1957, and November 1957 to April 1958.

a Computed on basis of available record and correlation with thermograph records for South Fork Alsea River near Alsea and Drift Creek near Salado.

ALSEA RIVER BASIN

267-South Fork Alsea River near Alsea (14-3062.)

Location.--Lat $44^{\circ}21'55''$, long $123^{\circ}35'55''$, in NE $\frac{1}{4}$ sec.12, T.14 S., R.8 W., on left bank 0.8 mile upstream from confluence with North Fork and 1.1 miles south of Alsea.

Drainage area.--49.5 sq mi.

Water-temperature records available.--Thermograph record April 1958 to September 1962.

Water temperature ($^{\circ}\text{F}$)

UMPQUA RIVER BASIN

295-North Umpqua River below Lemolo Lake, near Toketee Falls (14-3135.)

Location.--Lat $43^{\circ}19'20''$, long $122^{\circ}11'40''$, in NW $\frac{1}{4}$ NW $\frac{1}{4}$ sec.11, T.26 S., R.5 E., on right bank 1,900 ft downstream from Lemolo Lake, 13 miles east of town of Toketee Falls, and at mile 92.9.

Drainage area.--170 sq mi.

Water-temperature records available.--37 spot observations August 1947 to July 1954, prior to regulation by Lemolo Lake; 39 spot observations made August 1954 to September 1962.

Remarks.--Flow regulated since 1954 by Lemolo Lake; also slightly regulated by Diamond Lake. Record split to show effect of Lemolo Lake on water temperatures.

† Adjusted figures based on correlation with thermograph record for Middle Santiam River at mouth, near Foster.

306-Rock Creek at mouth, near Glide

Location.--Lat 43°20'10", long 123°00'05", in NE $\frac{1}{4}$ SW $\frac{1}{4}$ sec.1, T.26 S., R.3 W., 0.2 mile upstream from mouth and 5 miles northeast of Glide.

Water-temperature records available.--Three observations a day (6 a.m., 12 m., and 6 p.m.) January 1943 to December 1946 and once-daily observations from January 1947 to January 1948, January 1949 to September 1962.

Remarks.--Records furnished by Oregon State Game Commission. Diversion point is about a quarter of a mile above hatchery building.

[†] Adjusted figures based on correlation with thermograph record for Middle Santiam River at mouth, near Foster.

308-North Umpqua River above Sutherlin Creek, at Winchester

Location.--Lat 43°17'00", long 123°21'20", in SW $\frac{1}{4}$ NE $\frac{1}{4}$ sec.25, T.26 S., R.6 W., at U. S. Highway 99 crossing in Winchester, 2 miles upstream from Sutherlin Creek, 5 miles upstream from U. S. Geological Survey gaging station at Browns Bridge, and at mile 7.0.

Drainage area.--1,306 sq mi, at railroad bridge in Winchester, site of former U. S. Geological Survey gaging station.

Water-temperature records available.--Thermograph record December 1960 to September 1962.

Remarks.--Thermograph record furnished by Roseburg-Oregon Water Corporation. Regulation by Pacific Power & Light powerplant about 900 ft upstream. Slight regulation by Lemolo Lake and Diamond Lake.

309-Sutherlin Creek at Sutherlin (14-3192.)

Location.--Lat 43°23'20", long 123°18'10", in SW $\frac{1}{4}$ sec.16, T.25 S., R.5 W., on right bank at downstream side of Waite Street bridge in Sutherlin and 1 $\frac{1}{2}$ miles upstream from Cooper Creek.

Drainage area.--16.4 sq mi.

Water-temperature records available.--44 spot observations December 1955 to June 1962. Creek dry July to September and part of October most years.

Remarks.--Adjusted figures not shown because correlation is poor and there is no flow during the critical warm months.

310-North Umpqua River at Winchester (14-3195.)

Location.--Lat $43^{\circ}16'20''$, long $123^{\circ}24'40''$, in NW $\frac{1}{4}$ sec.33, T.26 S., R.6 W., on right bank at Browns Bridge, 3 miles west of Winchester, and at mile 1.8.

Drainage area.--1,344 sq mi.

Water-temperature records available.--57 spot observations December 1954 to September 1962.

Remarks.--Diurnal fluctuation of flow caused by upstream powerplants.

324-Ferry Creek and Geiger Creek near Bandon

Location.--Lat 43°07'00", long 124°23'00", in NE $\frac{1}{4}$ SE $\frac{1}{4}$ sec.29, T.28 S., R.14 W., at fish hatchery, 1.5 miles east of Bandon at confluence of Ferry and Geiger Creeks.

Records available.--Three observations a day (6 a.m., 12 m., and 6 p.m.) of water temperature February 1943 to December 1946, and once-daily readings (1 p.m.) thereafter. Records fragmentary in water years 1943-45 and missing for February to December 1948.

Remarks.--Records furnished by Oregon State Game Commission. Water for hatchery is diverted from 300 feet up each fork. Both creeks have identical temperatures according to State Game Commission.

^t Adjusted figures based on correlation with thermograph record for Breitenbush River above Canyon Creek, near Detroit.

327-Rogue River at Farewell Bend

Location.--Lat 42°55'00", long 122°26'15", in NW $\frac{1}{2}$ SW $\frac{1}{4}$ sec.35, T.30 S., R.3 E., 0.4 mile north of the town of Union Creek, 1.0 mile downstream from Castle Creek, and at mile 188.0.

Water-temperature records available.--Thermograph record July to October 1960.

Remarks.--Record furnished by the U. S. Fish and Wildlife Service.

328-Rogue River above Prospect (14-3280.)

Location.--Lat 42°46'30", long 122°29'55", in NE $\frac{1}{4}$ sec.19, T.32 S., R.3 E., on left bank 1.5 miles upstream from Pacific Power & Light Co. diversion dam, 1.8 miles northwest of Prospect, and at mile 173.5.

Drainage area.--312 sq mi.

Water-temperature records available.--75 spot observations April 1947 to September 1962. Only one observation was made from November 1948 to October 1950, and none from January 1959 to March 1960.

[†] Adjusted figures based on correlation with thermograph record for Breitenbush River above Canyon Creek, near Detroit.

329-Rogue River at Prospect

Location--Lat 42°45'35", long 122°30'00", in SE $\frac{1}{4}$ NE $\frac{1}{4}$ sec.30, T.32 S., R.3 E., at mouth of Schoolma'am Creek, 0.2 mile upstream from Pacific Power & Light Co. diversion dam, 0.7 mile northwest of Prospect, 1.0 mile downstream from U. S. Geological Survey gaging station, and at mile 172.5.

Drainage area--312 sq mi, at U. S. Geological Survey gaging station 1.0 mile upstream.

Water-temperature records available.--Thermograph record November 1959 to October 1960.

Remarks.--Record furnished by U. S. Fish and Wildlife Service.

330-South Fork power canal near Prospect (14-3315.)

Location.--Lat 42°42'50", long 122°24'20", in E½ of sec.12, T.33 S., R.3 E., one mile below head gate at diversion dam on South Fork of Rogue River and 5 miles southeast of Prospect.

Water-temperature records available.--77 spot observations October 1947 to September 1962. No observations were made December 1957 to October 1958, and January 1959 to March 1960.

Remarks.--Flow controlled by gates at diversion dam which is located one mile above gage.

338-South Fork Big Butte Creek at Butte Falls

Location.--Lat 42°32'15", long 122°33'10", in SW $\frac{1}{4}$ sec.11, T.35 S., R.2 E., at fish hatchery 0.8 mile southeast of Butte Falls.

Water-temperature records available.--Three observations a day (6 a.m., 12 m., and 6 p.m.) January 1943 to January 1946, once-daily readings thereafter. Records incomplete or missing for September 1943, September to December 1944, August to October 1945, February to April and September 1946, January 1948 to February 1949, and April, May 1949.

Remarks.--Records furnished by Oregon State Game Commission. Point of diversion is about 1,500 ft upstream from hatchery building.

^t Adjusted figures based on correlation with thermograph record for Middle Santiam River at mouth, near Foster.

341-Rogue River at Casey State Park, at McLeod

Location--Lat 42°39'30", long 122°42'15", in SW $\frac{1}{4}$ NE $\frac{1}{4}$ sec.33, T.33 S., R.1 E., at Casey State Park 0.6 mile downstream from Big Butte Creek, 0.9 mile west southwest of McLeod, and at mile 154.2.

Water-temperature records available.--Thermograph record April to November 1960.

Remarks.--Some diurnal fluctuation of flow caused by powerplant near Prospect. Record furnished by U.S. Fish and Wildlife Service.

Water temperature (°F)

342-Elk Creek near Trail (14-3380.)

Location.--Lat $42^{\circ}39'50''$, long $122^{\circ}44'50''$, in SW $\frac{1}{4}$ sec.30, T.33 S., R.1 E., on right bank 0.4 mile upstream from mouth and 3.3 miles northeast of Trail.

Drainage area.--133 sq mi.

Water-temperature records available.--103 spot observations November 1946 to September 1962. No readings were made from January 1959 to March 1960. Thermograph record October 1959 to October 1960.

Remarks.--Thermograph record furnished by U.S. Fish and Wildlife Service.

343-Rogue River at Lewis Creek, near Trail

Location.--Lat $42^{\circ}39'00''$, long $122^{\circ}47'20''$, in NE $\frac{1}{4}$ NW $\frac{1}{4}$ sec.2, T.34 S., R.1 W., at mouth of Lewis Creek, 1.1 miles upstream from Trail Creek, 1.1 miles east of Trail, and at mile 149.6.

Drainage area.--1,110 sq mi, approximately, at former U.S. Geological Survey gaging station 1 $\frac{1}{2}$ miles downstream from Trail Creek.

Water-temperature records available.--Thermograph record October 1959 to October 1960.

Remarks.--Some regulation of flow by powerplant below Prospect. Thermograph record furnished by U.S. Fish and Wildlife Service.

ROGUE RIVER BASIN

345-Little Butte Creek at Eagle Point

Location.--Lat 42°28'15", long 122°48'05", in SW $\frac{1}{4}$ sec.3, T.36 S., R.1 W., in Eagle Point, 2.0 miles upstream from Antelope Creek, and 4.7 miles upstream from mouth.

Drainage area.--293 sq mi, at former U.S. Geological Survey gaging station about 0.7 mile downstream.

Water-temperature records available.--Thermograph record November 1959 to October 1960.

Remarks.--Flow partly regulated by Fish Lake. Thermograph record furnished by U.S. Fish and Wildlife Service.

		Water-temperature (°F)

347-Emigrant Creek below Walker Creek, near Ashland (14-3505.)

Location.--Lat 42°11'40", long 122°39'00", in NE $\frac{1}{4}$ SW $\frac{1}{4}$ sec.12, T.39 S., R.1 E., on right bank 200 ft downstream from Walker Creek and 3 miles east of Ashland.

Drainage area.--110 sq mi.

Water-temperature records available.--51 spot observations May 1947 to November 1951.

Remarks.--Natural flow of stream is affected by storage at Emigrant Lake.

		Water temperature (°F)											
		Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.
Observed	Mean	57	46	41	38	40	44	52	63	66	69	69	67
	Max.-Min.	59 55	50 39	46 35	43 32	44 38	49 37	59 46	72 49	74 54	73 65	71 68	73 60
Adjusted	Mean	-	-	-	-	-	-	-	-	-	-	-	-
	Max.-Min.												

Note.--Not sufficient basis for correlation as most observations were made prior to all thermograph records.

348-Bear Creek at Medford (14-3575.)

Location.--Lat 42°19'40", long 122°52'10", in NW $\frac{1}{4}$ sec.30, T.37 S., R.1 W., on left bank 40 ft upstream from Main Street Bridge in Medford.

Drainage area.--289 sq mi.

Water-temperature records available.--28 spot observations December 1947 to November 1951. 15 spot observations May 1958 to September 1962. No observations were made September 1958 to December 1961.

Remarks.--Flow partly regulated since 1924 by Emigrant Lake.

ROGUE RIVER BASIN

352-Rogue River at Grants Pass (14-3615.)

Location.--Lat $42^{\circ}25'50''$, long $123^{\circ}19'00''$, in NW $\frac{1}{4}$ sec.20, T.36 S., R.5 W., on right bank at city of Grants Pass filter plant, 0.6 mile upstream from bridge on U.S. Highway 99 at Grants Pass, and at mile 101.5.

Drainage area.--2,459 sq mi.

Water-temperature records available.--81 spot observations June 1947 to September 1962. Once-daily observations (about noon) January 1953 to September 1958. Thermograph record July to October 1960.

Remarks.--Large diurnal fluctuation of flow at times caused by Savage Rapids Dam and by powerplant at Raygold. The spot observation data are shown as well as the combined daily-observation and thermograph record to show how the records compare. Thermograph record furnished by U.S. Fish and Wildlife Service.
